A;Accession: S07157
A;Molecule type: protein
A;Residues: 'Z',2-10 cABE2
C;Comment: Hypertrehalosemic factor II lacks the tryptophan modification.
C;Comment: This peptide raises hemolymph levels of trehalose in the cockroach Periplanets C;Comment: This peptide raises hemolymph levels of trehalose in the cockroach Periplanets C;Comperfamily: adipokinetic hormone
C;Keywords: amidated carboxyl end; glycoprotein; hormone; neuropeptide; pyroglutamic acit F;1/Modified site: pyrrolidone carboxylic acid (GIn) #status experimental
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   C;Superfamily: adipokinetic hormone

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Appertrehalosemic hormone - gray cockroach
Cispecies: Nauphoeta cinerea (gray cockroach)
Cispecies: Nauphoeta cinerea (gray cockroach)
Cipecies: Nauphoeta cinerea (gray cockroach)
Cipecesion: Az6381

"Isolation and primary structure of speptide from the corpora cardiaca of Heliothis zea with adipokinetic activity.";

Biochem. Biophys. Res. Commun. 135:622-628(1986).

L. FUNCTION: This hormone, released from calls in the corpora cardiaca after the beginning of flight, causes release of diglycerides from the fat body and then stimulates the flight muscles to use these diglycerides as an energy source.

-!- SUBCELLULAR LOCATION: Secreted.

-!- SIMILARITY: Belongs to the AKH / HRTH / RPCH family.

PIR, A24244; A24244.

Sequence analyses of two neuropeptides of the AKH/RPCH-family from
the lubber grasshopper; Romalea microptera.";
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         FUNCTION: This hormone, released from cells in the corpora cardiaca after the beginning of flight, causes release of diglycerides from the fat body and then stimulates the flight muscles to use these diglycerides as an energy source. SUBCELLULAR LOCATION: Secreted.
SIMILARITY: Belongs to the AKH / HRTH / RPCH family.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       ;;

Biol. Chem. Hoppe-Seyler 371:475-483(1990).

-!- FUNCTION: This hormone, released from cells in the corpora cardiaca after the beginning of flight, causes release of diglycerides from the fat body and then stimulates the flight muscles to use these diglycerides as an energy source.
-!- SUBCELLULAR LOCATION: Secreted.
-!- SIMILARITY: Belongs to the AKH / HRTH / RPCH family.
PIR; $10596; $10596.
